Magic trick # 1

- Give a friend a calculator and tell them to key in the number of the month in which they were born
- Multiply by 4
- Add 13
- Multiply by 25
- Subtract 200
- Add the day in which they were born
- Multiply by 2
- Subtract 40
- Multiply by 50
- Add the last two digits of the year in which they were born
- Subtract 10,500
- The date will appear in the American format Month/Day/year

Magic trick # 2

- Open a book at the page 10, count down 8 lines and along 9 words. Write the word down and put it under the book so that no one can see it.
- Ask your friend to think of a 3 digit number. The first and last digits should have a difference of at least 2. (e.g. 863)
- Tell you friend to reverse the number and subtract the smaller one from the bigger one. (e.g. 863 – 368 = 495)
- Reverse the digits in the answer and add the two numbers (e.g. 495 + 594 = 1,089)
- Now tell your friend to open the book at the page that corresponds to the first two digits. He should use the third digit to find the line and the last digit to find the find the word. Ask him to say the word out loud. Reveal your word that you kept secret under the book.

Magic trick # 3

- Give a friend a calculator and ask them to punch in any 3 digit number twice to make a 6 digits number. Tell him that you are going to use your magic powers to divide his number without a remainder every time.
- Ask him to divide the number by 7
- Ask him to divide the number by 11
- Ask him to divide it by 13
- Ask him what's left? The original number – Amazing !!!
