
My room:
story of a collage

My room: story of a collage

This story of a collage
begins in a very special place,
your room!
It is in your room,
where you have
your personal things,
where you play and work,
where you sleep and dream.
All these experiences that
you live staying in your room,
come together into a puzzle.
And that puzzle
is the memory
you have of your room.

The story continues
when I ask you:
what does your room look like?
Then, you have to create
a representation
of your room
for me.
This representation
could be a drawing,
could be a painting,
could be a photo,
could be even a film!,
and also
could be a collage,
Actually,
collage,
also resemble a puzzle,
in the way that
put pieces together.

Now,
you have to continue the story,
through your collage...

Let's make
a paper collage of your room!

MATERIALS

You will need these materials for the collage:

- Scissors
- Glue (stick or liquid)
- Paper: color paper, cardboard, newspaper, magazines...
- Fabric: some retail of cloth
- Colors: pencils, crayons, marker, watercolors...

Many of this materials can be found on the paper recycling bin. For example: a piece o cardboard from a packaging box, paper shopping bags, old magazines or newspapers...

NOTES:

- If you don't have color paper you can *paint white paper* with any colors and then cut the piece you need.
- you can also *tear the paper* with your hands instead of using scissors. This gives a different texture to the collage.

HOW TO START

— The best thing to start is going to your room and observe. Observe the position of the objects in the room, their colors, how they are organized.

— Now, go to your working area and prepare the materials to work. If your working area is in your room, then you don't have to go anywhere!

— Start drawing with pencil the space of your room (you can use a white or colored paper to draw). Try to represent where the objects are placed: bed, table, chair, window, closet... You don't need to much detail in this phase.

— Once you have the drawing, you can start looking into the materials you have collected and select pieces that you consider you may use.

— With the selected pieces and scissors, start cutting shapes of the objects you are going to represent. Maybe the window, the table and the bed could be good starting points.

— You can cut big pieces and really small pieces. Also, an object can be made of only one piece or made of many pieces.

— Start gluing the pieces into the paper. You can glue things side by side, or one of top of the other one.

— You can add drawing or coloring into your collage, but remember that collage is a technique that requires mainly cutting and gluing.

*Collage is a wonderful and really fun technique, so **enjoy a lot!***
