PAINTING WITH LINES

To paint with lines is another way of giving color to our drawings.
How we do it?. Let's follow the steps:

STEPS

1. Take a moment to think about: *what do you want to draw?*
Look for a theme that you like!
Maybe a place that you would like to visit, a view from your window, an imaginary place... can be outside or inside, or even both.
Perhaps an abstract composition with geometrical figures.
Also could be an object, an animal or a person.

2. Using a pencil, make a drawing of whatever you have decided on a white paper or cardboard.

3. Once you have the drawing finished with pencil, it is time to color it.
Now is the moment to change the way we normally do it:
Instead of using the colors to fill up the white areas of the paper, we are going to use lines of color.

This lines can be:

Horizontal Vertical Diagonal Zig zag Wavy Curved

Others...

4. You can use as many colors as you want to make the lines or if you prefer, use only black and white.
The lines can be thinner or wider depending of your choice.
The best materials for this technique are *markers and color pencils* because they allow you to create a more precise and define line.

Here you have some examples of drawings where the color has been applied in this way, using lines.
Remember, these are just examples for you to understand more clearly the activity, but *you can create your own and unique design.*
Have fun!
