HOW TO SOLVE ANY MATH WORD PROBLEM

1	**Read the text** of the problem **slowly** and **underline** all the information given.	
2	**Write the important information** down and try to **draw/sketch** what you know.	
3	**Read the question** of the problem again and **write it down**.	
4	Identify if the problem can be **solved in one or more steps**. What **arithmetical operation** you need to apply for the first step, then for the second and so on.	
5	Apply your strategy and **solve** the problem.	
6	**Read** the problem again and try to understand if your **answer makes sense**.	

If the answer makes sense you're done, but if it doesn't, go back and analyze what went wrong.
